RUN-001 - Password Reset & Account Unlock (Okta)

Purpose

Provide L1 Service Desk staff with step-by-step procedures to reset a user's Okta password and/or unlock a locked Okta account. This covers standard user accounts; privileged/admin account unlocks require L2 approval (see Escalation).

Prerequisites / Access Needed

Requirement

Details

Role: Help Desk Administrator - request via REQ in RobotixDesk if not provisioned

Must confirm caller identity before taking action (see Step 1)

Every action must be logged against an INC or REQ ticket

Your own Okta Verify push must be active to access the Admin Console

Okta Admin Console access

Identity verification

RobotixDesk ticket

MFA

Procedure

1. Verify Caller Identity

Before any account action, confirm the user's identity using two of the following:

Employee ID (format: SUM-#####)

(cid:127) Manager's full name

Last four digits of their work phone on file

Date of birth (for employees - not contractors)

Recent ticket number they opened

If the caller cannot provide two factors, do not proceed. Log the attempt in the ticket and advise the user to appear in person at their nearest IT office with a government-issued ID, or have their manager submit a request on their behalf via <https://help.robotix.com>.

2. Open a Ticket

(cid:127) (cid:127) (cid:127) (cid:127)

1. Log into RobotixDesk at <https://help.robotix.com>.

2. Create or open the existing INC/REQ ticket for this user.

3. Note the ticket ID (e.g., INC-004812) - you will reference it in your Okta audit note.

3. Access Okta Admin Console

1. Navigate to <https://robotix.okta.com/admin>.

2. Authenticate with your IT staff credentials and approve the Okta Verify push.

3. Go to Directory > People.

4. Locate the User

1. Search by first name, last name, or UPN (firstname.lastname@robotix.com).

2. Confirm the result matches the correct employee - check Department and Manager fields.

3. Click the user's name to open their profile.

5a. Unlock a Locked Account

1. On the user's profile page, check the Status badge. It will read Locked Out if the account is locked.

2. Click Unlock (top-right action menu or the inline Unlock button).

3. Okta will immediately set the status back to Active.

4.

In the More Actions dropdown, select Add Note and enter: Unlocked per [ticket ID]. Identity verified by [your name].

5b. Reset Password (Admin-Initiated Temp Password)

Use this when the user has forgotten their password or when instructed by a manager/HR.

1. On the user's profile, click More Actions > Reset Password.

2. Select Send user an email with a link to reset their password (preferred - sends to their

secondary/personal email on file). - If no secondary email is on file, select Set a temporary password and read it to the verified user over the phone, or relay via a secure channel (1Password - share a one-time secret).

3. Confirm the action. The user's status changes to Password Reset.

4.

Inform the user the link expires in 60 minutes.

5. Add an Okta note: Password reset per [ticket ID]. Identity verified by [your name].

5c. Reset Password AND Unlock (Both Needed)

If the account is both locked and the password must be reset:

1. Perform 5a (Unlock) first.

2. Then perform 5b (Reset Password).

6. MFA Factor Re-enrollment (If Required)

If the user has lost access to their Okta Verify device and cannot self-serve:

1. On the user profile, go to the Security tab.

2. Under Enrolled Factors, locate Okta Verify.

3. Click the gear icon > Remove to unenroll the factor.

4.

Instruct the user to re-enroll at <https://robotix.okta.com/user/settings> by clicking Set up next to Okta Verify.

5. Log the factor removal in the ticket: Okta Verify factor removed for re-enrollment per
[ticket ID].

YubiKey factor removal for privileged accounts requires L2 authorization. Do not remove YubiKey factors without L2 sign-off.

7. Notify the User

Confirm with the user that they can log in at <https://robotix.okta.com>.

Remind them that their new password must meet Robotix IT password policy:

(cid:127) Minimum 14 characters

At least one uppercase, one lowercase, one number, one special character

Cannot reuse the last 10 passwords

Remind them to update their password in 1Password.

8. Close the Ticket

1. Update the ticket with actions taken and resolution.

2. Set ticket status to Resolved.

3. Category: Identity & Access / Sub-category: Password / Account Unlock.

Verification

Check

Expected Result

Okta user status

Active

User can log in at robotix.okta.com

Successful authentication

MFA prompt received and approved

Okta Verify push delivered and approved

Ticket notes

Audit note present in Okta profile

Rollback / If It Fails

Symptom

Action

Unlock button greyed out or missing

Account may be suspended (not locked) - escalate to L2

(cid:127) (cid:127) (cid:127) (cid:127) (cid:127)

Password reset email not received

Temp password rejected at login

Check secondary email address on Okta profile; resend; check spam; verify email is correct

Confirm account status is Active, not Password Reset expired; re-issue temp password

User still cannot log in after reset

Check for Okta sign-on policy restrictions or network/IP block - escalate to L2

"You do not have permission" error in Okta console

Your Help Desk Admin role may not be provisioned; escalate to L2
