RUN-003 - User Offboarding / Deprovisioning

Purpose

Define the complete, ordered procedure for deprovisioning a departing employee or contractor. All steps must be completed on or before the user's last day to prevent unauthorized access. HR must initiate via an offboarding REQ ticket at least 2 business days before the effective date.

Security note: Involuntary terminations (immediate, for cause) are treated as P2 and must be completed within 1 hour of notification. Follow the Immediate Termination path in Step 2.

Prerequisites / Access Needed

Requirement

Required Information (From HR Offboarding Form)

Field

Example

Employee full name

Carlos Whitfield

UPN

Employee ID

carlos.whitfield@robotix.com

SUM-06234

Last day (access end date/time)

2026-07-11 at 5:00 PM ET

Termination type

Voluntary / Involuntary

Manager UPN

linda.park@robotix.com

Email delegate / forwarding

Forward to linda.park@robotix.com for 30 days

Data retention instructions

Manager retains OneDrive for 90 days

Hardware return method

In-person return to Denver HQ

Assets to reclaim

SUM-LT-04417 (Dell Latitude 7440)

Procedure

1. Confirm Ticket & Authorization

1. Open the REQ ticket in RobotixDesk.

2. Confirm HR or an authorized manager submitted the request. Do not process requests submitted by

the departing employee themselves or by unauthorized parties.

3. Note the effective date/time and termination type (voluntary vs. involuntary).

4.

If involuntary with same-day effective time, proceed immediately to Step 2 (Immediate path).

2. Suspend Okta Account (Access Revocation - Do This First)

Suspending the Okta account cascades to all SSO-connected applications immediately.

Standard offboarding (planned last day): 1. At or after the effective date/time, log into <https://robotix.okta.com/admin>. 2. Go to Directory > People and locate the user. 3. Click More Actions > Suspend. 4. Confirm the suspension. Status changes to Suspended - the user can no longer log in to any Okta-managed app. 5. Add Okta note: Suspended per offboarding [ticket ID] effective [date/time]. Processed by [your name].

Immediate/involuntary termination: - Perform step 2 above immediately upon notification, regardless of time of day. - If outside business hours, on-call L2 must be paged to complete remaining steps within 4 hours. - Notify SOC (soc@robotix.com) for involuntary terminations so they can monitor for anomalous activity.

Do not delete the Okta account at this stage - deletion prevents audit log access and mailbox delegation setup.

3. Revoke Active Sessions

1. On the suspended user's Okta profile, click More Actions > Clear User Sessions.

2. This terminates all active browser/app sessions immediately.

4. Microsoft 365 - Email Delegation & Forwarding

1. Log into <https://admin.microsoft.com> > Users > Active Users.

2. Locate the user. Their account remains active in M365 at this stage (controlled via Okta; direct M365 login uses Entra ID, which syncs the suspend within ~15 minutes).

3. Set up email forwarding or mailbox delegation per the offboarding ticket: - Forwarding: Admin Center > [User] > Mail tab > Manage email forwarding > Forward to [manager UPN]. - Delegate / Full Access: Admin Center > Groups > [User's mailbox as shared mailbox - see Step 5].

4.

If no forwarding is specified, do not forward; mailbox will be converted to shared.

5. Convert Mailbox to Shared Mailbox (After Access Revocation)

Converting to a shared mailbox removes the M365 E3 license requirement, reducing costs.

1.

In M365 Admin Center > Users > Active Users - select the user.

2. Click Convert to Shared Mailbox (under the Mail tab or via the "... " actions menu).

3. Confirm the conversion. This typically completes within 5-10 minutes.

4. Grant the manager (or delegate named in the ticket) Full Access to the shared mailbox: - Admin

Center > Groups > Shared Mailboxes > [User's mailbox] > Members > Add members.

5. Remove the M365 license from the account: - Admin Center > Users > [User] > Licenses and apps tab

> Uncheck all licenses > Save.

6. OneDrive Data Retention

1.

In M365 Admin Center > Users > Deleted Users (after license removal, the OneDrive is set to expire in 30 days by default - override this).

2. Go to SharePoint Admin Center > More features > User profiles > Manage User Profiles.

3. Search for the user and select Manage site collection owners.

4. Add the manager's UPN as a site collection owner so they can access the OneDrive for the retention

period specified in the ticket (default: 90 days per Robotix IT policy).

5. Note the OneDrive URL and retention deadline in the ticket.

7. Remove Okta Group Memberships and Application Assignments

1. Return to Okta Admin > Directory > People > [User].

2. Go to the Groups tab - click Remove for all groups.

3. Go to the Applications tab - for any individually-assigned apps (not group-based), click the app > Unassign.

4. This step is a belt-and-suspenders measure since suspension already blocks access.

8. Revoke VPN Access

GlobalProtect access is controlled via Okta group VPN-GlobalProtect-Standard. Removing this group (Step 7) revokes VPN. Verify:

1. Log into the Palo Alto Panorama console at <https://panorama.robotix.com>.

2. Navigate to Monitor > GlobalProtect > Connected Gateways and confirm the user has no active VPN sessions.

3.

If an active session is found, disconnect it: Right-click session > Disconnect.

9. Device Management - Wipe / Reclaim

Windows (Intune): 1. Log into <https://intune.microsoft.com> > Devices > All Devices. 2. Search for the asset tag(s) listed in the ticket (e.g., SUM-LT-04417). 3. If the device is being returned and will be reused: Click Retire (removes corporate data, leaves OS for re-imaging). 4. If device is lost/stolen or not being returned: Click Wipe (full factory reset). 5. Log the action in the ticket.

Mac (Jamf): 1. Log into <https://robotix.jamfcloud.com> > Computers. 2. Search by asset tag or serial number. 3. For returned devices: Send MDM Command > Wipe Computer (Erase All Content and Settings). 4. Confirm wipe command sent. Device will wipe when next connected to power/network. 5. After wipe confirmed, update the Jamf inventory record with status Available for Reuse.

10. Hardware Return Logistics

1.

2.

If in-person: Confirm with the manager that hardware has been returned to the IT office. Update the asset record in RobotixDesk CMDB to status In Stock - Awaiting Reimage.

If remote return: Confirm shipping label was sent (coordinate with L2 desktop team - shipping labels generated via the FedEx account). Log tracking number in ticket.

3. Update asset tag record in RobotixDesk.

11. 1Password Deprovisioning

1. Log into <https://robotix.1password.com/admin> > People.

2. Locate the user and click Suspend to immediately revoke access.

3. After confirming no data recovery is needed by the manager (per policy, vaults shared with the team remain accessible), click Delete User.

12. CrowdStrike - Verify Sensor Deregistration

After device wipe/return: 1. Log into <https://falcon.crowdstrike.com> > Host Management. 2. Search by hostname or asset tag. 3. If the device will be reimaged, the sensor will re-register automatically post-reimage. No action required now. 4. If device is being disposed of, click Hide Host to remove from the active console.

13. Final Audit and Ticket Closure

1. Complete the offboarding checklist in the REQ ticket (all steps above checked off).

2. Confirm with HR via ticket comment that deprovisioning is complete.

3. Set ticket status to Resolved.

4. Retain the ticket for audit purposes - do not delete.

Offboarding Checklist (Copy Into Ticket Notes)

☐ Okta account suspended ☐ Active sessions cleared ☐ M365 email forwarding/delegation set ☐ Mailbox converted to shared mailbox ☐ M365 license removed ☐ OneDrive retention / manager access set ☐ Okta groups removed ☐ VPN session verified clear

☐ Intune device: retired/wiped ☐ Jamf device: wiped (if Mac) ☐ Hardware return logged / tracking number

noted [] 1Password account suspended and deleted [] CrowdStrike host action taken [] HR notified -
deprovisioning complete

Verification

Check

Expected Result

Okta user status

Suspended

M365 user - Okta app

No active license

VPN - Panorama

No active sessions for user

Device status (Intune/Jamf)

Retired or Wipe command sent

1Password

Ticket

Rollback / If It Fails

User deleted

All checklist items marked complete

Symptom

Action

Okta suspend fails ("cannot suspend federated user")

Check if user is federated via external IdP; escalate to L2 Identity

Mailbox conversion fails

Device wipe not confirmed (device offline)

Run via Exchange Online PowerShell: Set-Mailbox -Identity upn -Type Shared; escalate to L2 if unable

Log wipe pending; set calendar reminder to confirm in 48 hrs; if device not recovered within 30 days, escalate to SOC

1Password vault contains sensitive data manager needs

Work with manager to transfer vault items first; then delete user
