

ID: RUN-005 Category: Runbook Audience: IT Staff Last updated: 2026-06-01

RUN-005 - Endpoint Reimage / Reprovision (Intune/Jamf)

Purpose

Provide L2 Desktop team staff with the procedure to reimage and reprovision a Robotix IT managed endpoint - either a Windows device (Dell Latitude 7440, managed via Microsoft Intune) or a Mac (MacBook Pro 14", managed via Jamf Pro). This runbook covers factory reset via MDM, clean OS installation via USB/network, and re-enrollment.

Prerequisites / Access Needed

Requirement

Details

Approved ticket

Intune admin access

Jamf Pro admin access

INC or REQ ticket with manager or HR authorization for the wipe

Intune Administrator or Device Enrollment Manager role

JSS Administrator or Computer Management role

Physical access to device (or remote MDM wipe)

Required for USB/network boot scenarios

Asset tag of device

e.g., SUM-LT-04417 or SUM-MB-00231

Windows 11 Pro USB media

Jamf enrollment USB (if needed)

Prepared per RUN-010; stored in IT supply room

Optional; Jamf PreStage enrollment used for Macs

User data backed up

Confirm with user/manager that OneDrive/cloud data is backed up before wiping

When to Reimage vs. MDM Wipe

Scenario

Recommended Action

Offboarding - device being reused

MDM Wipe (Intune Retire/Wipe or Jamf Erase) - simplest

Performance issue / OS corruption

Full reimage via USB + re-enroll to Intune/Jamf

Malware / CrowdStrike containment

Full wipe + reimage - do NOT just run MDM retire

New hire receiving a recycled device

Full reimage + re-enroll

User preference ("fresh start")

MDM Wipe is sufficient unless OS issues exist

Procedure - Windows (Intune)

W1. Back Up User Data

1. Confirm with the user or their manager that all data is saved to OneDrive or a SharePoint site.

OneDrive sync status should show a green checkmark in the system tray.

2. Note any locally installed software that is not in Intune Company Portal - these will need to be re-deployed post-reimage.

3. Document in the ticket that data backup was confirmed.

W2. Option A - MDM Wipe via Intune (Preferred for Offboarding/Recycle)

1. Log into <https://intune.microsoft.com>.

2. Navigate to Devices > All Devices.

3. Search by asset tag, serial number, or user UPN.

4. Click the device name.

5. Click Wipe (in the top menu bar).

6. Options: - Wipe device and retain enrollment state: Check this if the device will stay in the same

Intune tenant and re-enroll automatically. - Wipe device and continue to wipe even if device loses power: Check for thoroughness.

7. Click Wipe to confirm.

8. The device wipe begins. Monitor status in Intune > Device actions tab.

9. The device will reboot and factory reset. Enrollment state (Autopilot) is retained if the checkbox was selected.

W3. Option B - Full Reimage via USB (OS Corruption / Malware)

1. Retrieve a USB drive with Windows 11 Pro installation media from the IT supply room (drives are labeled with the build version; use the most recent).

2.

If the device is network-accessible and CrowdStrike is flagging it, first contain the device via Falcon console (Host Management > Contain Host) before touching it.

3. Boot the device to USB: - Power on the Dell Latitude 7440. - Press F12 at the Dell logo to enter the One-Time Boot Menu. - Select the USB drive.

4. Proceed through the Windows Setup: - Select Custom: Install Windows only (advanced). - Delete all existing partitions and install to the unallocated space (creates fresh partition). - Complete the Windows setup out-of-box experience (OOBE). Do not sign in with a personal Microsoft account - stop at the "Sign in with Microsoft" screen.

5. At the OOBE sign-in screen, press Shift+F10 to open a command prompt (for domain join / Intune enrollment bypass if Autopilot is not pre-configured). - Or select Set up for work or school and enter the

user's UPN to trigger Autopilot enrollment.

W4. Intune Autopilot Re-enrollment

If Autopilot is configured for the device (most Robotix IT devices are pre-registered):

1. At the OOB "Sign in with Microsoft" screen, enter the user's UPN

(firstname.lastname@robotix.com).

2. Authenticate with Okta (redirected via Entra ID).

3. Windows Autopilot begins: the device downloads Intune policies, applications, and configurations automatically.

4. Enrollment typically completes in 20-40 minutes depending on the number of apps.

5. Monitor enrollment status in Intune > Devices > Enrollment > Windows Autopilot Deployments.

If the device is NOT pre-registered in Autopilot, manually register it: 1. On the fresh Windows install, open PowerShell as Administrator. 2. Run: powershell Install-Script -Name Get-WindowsAutoPilotInfo -Force Get-WindowsAutoPilotInfo -Online 3. Sign in with an Intune admin account when prompted. 4. Wait 5-10 minutes for the device to appear in Intune > Devices > Windows > Windows enrollment > Autopilot Devices.

W5. Verify Windows Post-Enrollment

Check

Expected Result

Intune > Device status

Compliant

Company Portal installed

Yes - visible in Start Menu

CrowdStrike Falcon sensor

Running (check Services or Falcon console)

OneDrive client

Running and signed in with user UPN

Required apps deployed

All apps from Intune required policy visible in Company Portal / installed

Procedure - Mac (Jamf Pro)

M1. Back Up User Data

1. Confirm iCloud Drive / OneDrive sync is complete (green checkmark).

2. Note any apps installed outside of Jamf Self Service.

3. Document backup confirmation in the ticket.

M2. Option A - Erase via Jamf MDM Command (Preferred)

1. Log into <https://robotix.jamfcloud.com>.

2. Navigate to Computers and search by asset tag or serial number.

3. Click the computer record.

4. Click the Management tab > Send Remote Commands.

5. Select Erase Computer (macOS 12+: this sends an Erase All Content and Settings MDM command).

6. Optionally set a 6-digit PIN for Activation Lock bypass (record the PIN in the ticket - required to complete setup after erase).

7. Click Send.

8. The Mac will erase and restart. It lands at the Setup Assistant screen, ready for re-enrollment.

M3. Option B - Manual Erase via macOS Recovery (OS Corruption)

For Apple Silicon MacBook Pro 14":

1. Shut down the Mac.

2. Press and hold the power button until "Loading startup options" appears.

3. Select Options > Continue to enter macOS Recovery.

4. Open Disk Utility > select Macintosh HD > click Erase. - Format: APFS - Name: Macintosh HD

5. Exit Disk Utility.

6. Select Reinstall macOS (Sequoia 15) - this downloads and installs from Apple's servers. Requires internet connectivity (use Robotix-Corp Wi-Fi or hotspot).

7. After installation, the Mac boots to Setup Assistant.

M4. Jamf PreStage Enrollment (Re-enrollment)

Robotix IT uses Jamf PreStage enrollment via Apple Business Manager (ABM). All Robotix MacBook Pros are registered in ABM.

1. At the Setup Assistant, connect to Robotix-Corp Wi-Fi or a known good network.

2. The Mac contacts Apple's activation servers, detects the ABM enrollment profile, and is directed to Jamf.

3. Complete the Setup Assistant (language, region, Apple ID - skip personal Apple ID, use "Set Up Later").

4. At the Management Profile installation screen, click Enroll.

5. The Mac downloads the Jamf MDM profile and begins receiving policies.

Verify in Jamf: - Jamf > Computers > [Device] - last enrollment date should be today. - Check the Policies tab to confirm required policies are applied. - Check Software tab to confirm Self Service and core apps are installing.

M5. Assign to User in Jamf

1.

In Jamf Pro > Computers > [Device] > Inventory.

2. Under User and Location, set: - Username: UPN of the assigned user - Full name: User's display

name - Email: UPN

3. Click Save.

M6. Verify Mac Post-Enrollment

Check

Expected Result

Jamf > Device last check-in

Within last 30 minutes

CrowdStrike sensor active

Yes - Falcon console > Host Management

Self Service app

Installed and accessible

Okta Verify

FileVault

Rollback / If It Fails

Enrolled (user may need to re-enroll if factor was removed)

Enabled (Jamf policy enforces FileVault - verify under Disk Utility)

Symptom

Action

Autopilot enrollment fails ("Device not found")

Intune wipe not completing (device offline)

Jamf ABM enrollment not triggering

macOS reinstall fails (no internet)

CrowdStrike sensor not installing post-reimage

Device may not be registered in Autopilot; manually register via PowerShell Get-WindowsAutoPilotInfo; allow 10 min for sync

Wipe command queued; will execute when device next connects to internet; if device cannot be recovered, escalate to SOC for remote wipe follow-up

Verify device serial is in ABM (ABM portal > Devices); if missing, run DEP registration via Jamf > Devices > Actions > Add to ABM

Use Apple Configurator 2 on a Mac to restore via USB

Manually download the Falcon sensor from <https://falcon.crowdstrike.com> and install; provide CID from CrowdStrike console > Sensor Downloads

Escalation
