RUN-006 - VPN Access Provisioning (GlobalProtect)

## Purpose

Step-by-step procedure for provisioning, modifying, and revoking user access to the Robotix IT Palo Alto GlobalProtect VPN. Covers standard employee access, elevated split-tunnel profiles, and troubleshooting common connectivity issues.

## Prerequisites / Access Needed

### Requirement

#### Details

Approved REQ ticket

Manager-authorized request for VPN access

Okta Admin Console

Palo Alto Panorama console

Role: User Admin - to add/remove Okta group membership

Read access for monitoring; write access for L2+ for gateway config changes

RobotixDesk admin

To log and close the ticket

VPN Architecture Overview

### Component

Detail

Client

Gateway

Portal

Palo Alto GlobalProtect agent

vpn.robotix.com (primary); vpn-west.robotix.com (secondary)

vpn.robotix.com

Auth method

Okta SAML SSO + Okta Verify MFA (push)

Access profiles

Managed via

Standard (full-tunnel, all corp traffic), Split-Tunnel (specific routes only)

Palo Alto Panorama at <https://panorama.robotix.com>

Access Profiles Reference

Okta Group

VPN Profile

Access Level

VPN-GlobalProtect-Standard

Standard Full-Tunnel

VPN-GlobalProtect-SplitTunnelSplit-Tunnel

VPN-GlobalProtect-Vendor

Vendor Limited

VPN-GlobalProtect-Admin

Admin Full-Tunnel

All corporate resources, internet via corp proxy

Corporate subnets only; internet direct

Specific application subnets only; requires manager approval + L2

Privileged access - L3 only; requires CISO approval

Procedure - Provisioning Standard VPN Access

## **1. Validate the Request**

### **1. Open the REQ ticket.**

### **2. Confirm manager authorization is present in the ticket.**

3. Verify the user is a current employee or authorized contractor in Okta (status: Active).

### **4. Confirm the access profile requested (Standard is default for all employees).**

## **2. Add User to Okta VPN Group**

VPN access is controlled entirely via Okta group membership. The GlobalProtect agent uses Okta SAML for authentication.

### **1. Log into <https://robotix.okta.com/admin>.**

### **2. Go to Directory > Groups.**

### **3. Search for VPN-GlobalProtect-Standard.**

### **4. Click the group > Manage People > + Add Member.**

### **5. Search for the user by UPN and add them.**

### **6. Click Save.**

Okta pushes the group change to the GlobalProtect policy within 5 minutes.

For Split-Tunnel or Vendor profiles, add the user to the appropriate group instead. Vendor profile requires a second L2 approval comment in the ticket before adding.

## **3. Verify Okta Group Assignment**

### **1. Go to Directory > People > [User] > Groups tab.**

2. Confirm VPN-GlobalProtect-Standard (or the requested profile) appears in the group list.

## **4. Confirm GlobalProtect Client is Installed**

Windows: - GlobalProtect is deployed via Intune. Verify the agent is installed: check C:\Program Files\Palo Alto Networks\GlobalProtect\ or search for "GlobalProtect" in the Start Menu. - If not installed: Intune > Devices > [Device] > Apps tab - find GlobalProtect and click Install.

Mac: - GlobalProtect is deployed via Jamf. Verify via Jamf Pro > Computers > [Device] > Software tab. - If not installed: Jamf Pro > Computers > [Device] > Remote Commands > Install GlobalProtect. - User can also install via Jamf Self Service by searching for "GlobalProtect".

## **5. Configure GlobalProtect Client (First-Time Setup for User)**

Advise the user to follow these steps once the agent is installed:

### **1. Open the GlobalProtect application (system tray / menu bar icon).**

2.

If prompted for a portal address, enter: vpn.robotix.com.

### **3. Click Connect.**

### **4. A browser window opens - authenticate with Okta credentials (UPN + password).**

### **5. Approve the Okta Verify push on their mobile device.**

### **6. GlobalProtect connects automatically after MFA approval.**

### **7. The system tray icon turns green with a shield - connection is active.**

## **6. Notify the User**

Reply to the REQ ticket:

Subject: VPN Access Enabled - GlobalProtect

Hi [User Name],

Your VPN access has been provisioned.

To connect: 1. Open GlobalProtect (system tray or menu bar). 2. Portal address: vpn.robotix.com 3. Sign in with your Robotix IT credentials (Okta). 4. Approve the Okta Verify push.

VPN is required when accessing internal resources (e.g., file shares, internal apps) from outside the office. On-network (Robotix-Corp Wi-Fi), VPN is not required.

If you experience connection issues, see the IT self-service portal or contact: +1 (800) 555-7866 | servicedesk@robotix.com | Slack: #it-help

Ticket: [REQ-#####] Robotix IT Service Desk

## 7. Close the Ticket

**1. Document: user UPN, Okta group assigned, date/time, your name.**

**2. Set status to Resolved.**

Procedure - Revoking VPN Access

Used during offboarding (also covered in RUN-003) or when access is no longer needed.

**1. Log into <https://robotix.okta.com/admin>.**

**2. Go to Directory > Groups > VPN-GlobalProtect-Standard (or applicable group).**

**3. Find the user in the member list and click Remove (X icon).**

**4. Save.**

5.

In Panorama, verify the user has no active sessions: Monitor > GlobalProtect > Connected Gateways - search for the user.

6.

If an active session is found, select it and click Disconnect.

**7. Log the action in the ticket.**

Troubleshooting Common VPN Issues

Issue: "Cannot connect to portal vpn.robotix.com"

Check

Steps

Internet connectivity

Confirm user has internet access (browse to google.com)

Portal address typo

Re-enter exactly: vpn.robotix.com

GlobalProtect version

DNS resolution

Verify the installed version matches the current approved version (see Intune/Jamf app version) - update if outdated

From command prompt: nslookup vpn.robotix.com - should resolve to a Palo Alto gateway IP

Issue: "Authentication failed" or redirect loop at Okta

Check

Steps

Okta account status

Okta VPN group

Confirm user's Okta account is Active (not suspended/locked)

Confirm user is in VPN-GlobalProtect-Standard

Okta Verify enrolled

Okta app assignment

Confirm MFA factor is enrolled; if not, re-enroll per RUN-001 Step 6

Okta Admin > Applications > GlobalProtect > check user appears as Assigned

Issue: Connected but cannot reach internal resources

Check

VPN profile

Specific resource

CrowdStrike block

Escalate to L3

Steps

Confirm user is assigned to the correct profile (Standard vs. Split-Tunnel)

Check if the resource IP/subnet is included in the user's VPN profile routes

CrowdStrike Firewall may be blocking - check Falcon console > Firewall Management for any blocks on the

device

If routes and profile are correct but access fails, escalate to L3 - Networking team

Issue: GlobalProtect disconnects frequently / high latency

Check

Steps

Primary gateway saturated

ISP instability

Tunnel MTU

Verification

Check Panorama > Monitor > GlobalProtect > Gateway Utilization - if >80%, advise user to use vpn-west.robotix.com as alternative

Run ping vpn.robotix.com -n 20 and check for packet loss

Advise user to disable and re-enable GlobalProtect; if recurring, escalate to L3 Networking

Check

Expected Result

Okta group assigned

VPN-GlobalProtect-Standard (or appropriate group) shows for user

GlobalProtect status

Connected - green shield icon

Can reach internal resource (test)

e.g., ping 10.10.1.1 (internal gateway) responds

Panorama - active sessions

Session visible under user's UPN

Rollback / If It Fails

Symptom

Action

Okta group sync not pushing to GlobalProtect

Wait 5 minutes; if still not working, check Okta > Palo Alto Networks GlobalProtect app > Provisioning logs

GlobalProtect installer fails on Windows

Re-push via Intune: Devices > [Device] > Apps > Install; reboot device

GlobalProtect installer fails on Mac

Re-push via Jamf remote command or have user run via Self Service

Escalation

Condition

Escalate To

Contact

Gateway configuration changes needed

L3 - Networking

networking@robotix.com

Split-Tunnel or Vendor profile provisioning

L2 - must co-approve

Submit L2 co-approval in ticket

Admin Full-Tunnel profile (privileged VPN)

L3 + CISO approval

ciso@robotix.com

VPN gateway outage (multiple users affected)

L3 - Networking; declare P1 if widespread
