

Customer Advisory Board - Product Feedback Session

Date: May 25, 2024

Location: Conference Room / Zoom

Attendees: David Martinez, Emily Thompson, Nicole Sanders, Marcus Johnson

Customer Advisory Board Meeting Notes

Date: October 14, 2023 Time: 9:00 AM - 12:30 PM PT Attendees: 12 customer representatives, 5 Robotix team members

Current Product Feedback

RX-3000 Industrial Arm

- 85% of customers report improved throughput (avg. 32% increase)
- Reliability rating 4.2/5.0 across installations
- Motion control precision praised by automotive customers
- Integration time averaging 3.8 weeks vs. 6 weeks for competitors

Vision System Suite

- Computer vision accuracy rated 3.8/5.0
- False positive rate (2.3%) needs improvement
- API integration challenges reported by 4 customers

Feature Requests & Improvements

Priority Requests: 1. Enhanced collision detection system 2. Expanded API documentation for custom integrations 3. Remote monitoring capabilities via mobile app 4. Improved error reporting and diagnostic tools

Integration Needs: - Better compatibility with legacy PLC systems - Simplified calibration process - Additional pre-built integration modules for common MES platforms

Deployment & Integration Pain Points

Major Issues: - Initial calibration taking 30% longer than quoted - Network security protocols causing communication delays - Limited backward compatibility with RX-2000 peripherals - Training resources not keeping pace with software updates

Training & Documentation

Requests: - Video tutorials for common troubleshooting scenarios - Advanced programming guide for custom applications - Regular webinar series for maintenance staff - Expanded multi-language support (especially German, Mandarin)

Support Experience

Positive Feedback: - 24/7 emergency support response (avg. 18 min) - Technical support knowledge rated 4.4/5.0 - Remote diagnostic capabilities

Areas for Improvement: - Tier 1 support resolution rate (currently 62%, target 75%) - Parts availability for older models - Response time for non-critical issues

Future Product Direction

Customer Priorities: 1. AI-driven predictive maintenance 2. Enhanced safety features for human-robot collaboration 3. Cloud-based fleet management 4. Energy efficiency improvements

Industry Trends & Needs

Emerging Requirements: - IoT integration for Industry 4.0 compliance - Increased demand for cobots in assembly - Data analytics for performance optimization - Sustainability metrics tracking

Competitive Analysis

Market Position: - Leading in precision (+/- 0.02mm vs industry avg. +/- 0.05mm) - Lagging in software ecosystem development - Price point 15% higher than primary competitors - Superior energy efficiency (12% below industry average)

Action Items

Product Team: 1. Develop collision detection upgrade (Q1 2024) 2. Release expanded API documentation (30 days) 3. Create mobile monitoring app roadmap (60 days) 4. Review calibration process optimization (Q4 2023)

Support Team: 1. Implement new training program (Q1 2024) 2. Expand parts stocking for legacy systems 3. Improve Tier 1 support processes

R&D: 1. Evaluate AI predictive maintenance solutions 2. Research cloud-based management platform options 3. Develop energy efficiency roadmap

Next Review: January 15, 2024
