

BYOD & Mobile Device Policy

1. Purpose

This policy governs the use of personally owned ("Bring Your Own Device" / BYOD) devices and company-issued mobile devices to access Summit IT Services systems, data, and networks. The policy establishes minimum security requirements, defines what management controls will be applied to personal devices, and protects both employee privacy and company data.

2. Scope

This policy applies to:

- All personally owned smartphones, tablets, and laptops used to access Summit IT Services email, applications, or data.
- All company-issued mobile phones and tablets managed under Microsoft Intune.
- Any device used to access the Summit -Corp wireless network or GlobalProtect VPN.

This policy does **not** replace POL-006 (Remote Work IT Policy), which covers expectations for home office setups using company-issued computers. Company-issued Windows and macOS laptops are governed by Intune and Jamf Pro respectively; personal laptops used for work must comply with this policy.

3. Policy Statements

3.1 Eligibility and Registration

3.1.1 Employees wishing to use a personal device for work must register the device through the self-service portal at <https://help.summitit.com> before accessing any Summit IT Services resource.

3.1.2 The following personal device types are eligible for BYOD enrollment:

Device Type	Minimum OS Version	MDM Enrollment
iPhone	iOS 16 or later	Intune (user enrollment / MAM)
iPad	iPadOS 16 or later	Intune (user enrollment / MAM)
Android phone/tablet	Android 12 or later	Intune (work profile)

Personal macOS laptop	macOS Sonoma (14) or later	Jamf enrollment not applied; Intune MAM only
Personal Windows laptop	Windows 11 Pro or later	Intune (user-based enrollment only)

3.1.3 Devices running jailbroken (iOS) or rooted (Android) operating systems are not permitted to access Summit IT Services systems under any circumstances. Intune Conditional Access policies enforce this restriction automatically.

3.1.4 Devices that fail to maintain compliance with minimum OS and patch requirements will be blocked by Okta Conditional Access until they are updated.

3.2 Mobile Device Management (MDM) Enrollment

3.2.1 **Company-issued mobile devices** (phones, tablets) must be fully enrolled in Microsoft Intune and managed via MDM. Full device management allows IT to enforce encryption, passcode, and remote wipe on the entire device.

3.2.2 **Personal mobile devices (BYOD phones and tablets)** are enrolled using Intune **user enrollment** (iOS/iPadOS) or **Android work profile**, which creates a cryptographically isolated work container. IT management applies only to the work container; personal data and apps on the device remain private and inaccessible to IT.

3.2.3 **Personal laptops** are enrolled using Intune **Mobile Application Management (MAM)** only - no MDM profile is installed. MAM wraps specific applications (Outlook, Teams, OneDrive) to enforce data protection policies without granting IT access to the rest of the device.

3.2.4 Employees using Outlook, Teams, or OneDrive on a personal device must use the Microsoft apps from the App Store or Google Play and authenticate through Okta SSO.

3.3 Security Requirements for All BYOD Devices

All personally owned devices used for work must meet the following minimum security requirements at all times:

3.3.1 **Passcode / PIN:** A minimum 6-digit PIN or biometric (Face ID / fingerprint) lock screen must be enabled. Screen auto-lock must be set to 5 minutes or less.

3.3.2 **Encryption:** Full-device encryption must be enabled. This is the default on modern iOS, Android, and Windows devices; macOS devices must have FileVault enabled.

3.3.3 **OS Updates:** Devices must be running a supported OS version and must have OS security patches applied within **30 days** of release.

3.3.4 **Antivirus / EDR:** Personal macOS and Windows laptops used for more than Outlook/Teams access (i.e., accessing internal applications or storing company files) must have an approved endpoint security solution installed. Contact the IT Service Desk to request a CrowdStrike Falcon sensor for personal laptops under the BYOD program.

3.3.5 Okta Verify: The Okta Verify app must be installed and enrolled for MFA on all BYOD phones/tablets.

3.3.6 GlobalProtect VPN: If accessing internal Summit IT applications from a personal device, GlobalProtect must be installed and connected.

3.4 Data Handling on Personal Devices

3.4.1 Company data must not be copied from managed apps (Outlook, Teams, OneDrive) to personal apps or personal storage on the same device. Intune MAM "open-in" controls enforce this restriction on iOS and Android.

3.4.2 Screenshots of confidential or sensitive company data on personal devices are prohibited. Intune MAM blocks screenshot capture within managed apps on Android; on iOS, this is a policy control and employees are responsible for compliance.

3.4.3 Confidential company documents must not be downloaded to the local storage of personal devices. Viewing via the managed apps (OneDrive, Teams) in the cloud is preferred.

3.4.4 Company email, calendar, and contacts must be accessed exclusively through the Outlook for iOS/Android or Outlook desktop app with Intune MAM applied. Native device mail/calendar apps must not be configured with company accounts.

3.5 Remote Wipe

3.5.1 In the event of device loss, theft, or employee departure, IT Security may initiate a remote wipe of the **work container only** (user enrollment / work profile / MAM wipe) on BYOD devices. This removes only company data and managed apps; personal photos, messages, and apps are not affected.

3.5.2 Company-owned mobile devices enrolled in full MDM are subject to full device remote wipe upon loss, theft, or departure.

3.5.3 Employees must report a lost or stolen device to the IT Service Desk within **2 hours** of discovery, 24/7. The after-hours P1 line (+1 (800) 555-7866) supports this. Remote wipe of lost devices will be initiated within 4 hours of report unless the employee confirms the device has been recovered.

3.5.4 Employees are advised that selecting BYOD enrollment means they consent to the selective remote wipe of company data described in 3.5.1. This consent is documented at enrollment.

3.6 Acceptable Use on Mobile Devices

3.6.1 The general Acceptable Use Policy (POL-001) applies to company data accessed on personal devices.

3.6.2 Personal devices must not be used to access Summit IT Services resources while operating a motor vehicle.

3.6.3 Employees must not install personal apps that have been flagged as high-risk or malicious by IT Security on the same device used to access company resources.

3.7 Offboarding and Unenrollment

3.7.1 Upon separation from Summit IT Services, company data will be selectively wiped from BYOD devices within 24 hours of the offboarding process initiation.

3.7.2 Company-issued mobile devices must be returned within 5 business days of separation. Failure to return devices will result in a full remote wipe initiated by IT.

3.7.3 Employees may request voluntary unenrollment of a personal device through SummitDesk. Unenrollment triggers a selective wipe of all company data from the device. The request will be processed within one business day.

4. Roles & Responsibilities

Role	Responsibility
All Employees	Register BYOD devices before use; maintain OS/patch compliance; report lost devices immediately; comply with data handling rules
IT Service Desk (L1)	Assist with enrollment; process device loss reports; initiate selective wipe
IT Security & Compliance	Own policy; maintain Intune MAM/MDM policies; monitor compliance; conduct investigations
L2 Desktop & Systems	Manage Intune device compliance; troubleshoot enrollment; issue CrowdStrike sensor for personal laptops
L3 Engineering	Configure Conditional Access, Intune compliance policies, and Okta Device Trust
HR	Trigger offboarding workflow; coordinate device return
Legal	Advise on privacy implications of mobile management in applicable jurisdictions

5. Enforcement & Consequences

5.1 Intune Conditional Access automatically blocks non-compliant devices from accessing company resources. Employees will receive an email notification explaining the compliance gap and how to remediate.

5.2 Policy violations:

- **Using an unapproved device type or OS:** Access blocked; device must be upgraded or replaced before re-enrollment.

- **Circumventing MAM controls (e.g., using a non-managed app for company email):** Written warning; account restricted to managed apps only.
- **Failure to report lost device promptly:** Written warning; investigation of potential data exposure.
- **Data exfiltration from managed apps to personal storage:** HR investigation; potential termination.

6. Exceptions

Exceptions (e.g., use of an older OS version due to hardware constraints) must be submitted via SummitDesk. Exceptions require IT Security approval and defined compensating controls. The maximum exception duration is 90 days.

8. Revision History

Version	Date	Author	Summary of Changes
1.0	2022-01-15	IT Security	Initial BYOD policy; covered smartphones and tablets only
1.1	2023-03-01	IT Security	Added personal laptop MAM; updated Android work profile guidance
2.0	2024-09-01	IT Security & Compliance	Full rewrite; aligned to Intune user enrollment model; clarified selective wipe consent; added CrowdStrike BYOD laptop option

2.0.1	2025-09-12	IT Security & Compliance	Annual review; updated minimum OS versions; no structural changes
