

IT Asset Management Policy

1. Purpose

This policy defines how Summit IT Services acquires, tracks, assigns, maintains, and disposes of IT hardware and software assets. Effective asset management ensures that all devices are accounted for, appropriately configured with security controls, licensed, and properly disposed of at end of life. This reduces security risk, prevents license non-compliance, and protects the company's investment.

2. Scope

This policy applies to:

- All hardware assets owned or leased by Summit IT Services, including laptops, desktop computers, monitors, mobile devices, printers, networking equipment, servers, and peripherals.
- All software licenses and SaaS subscriptions procured by or on behalf of Summit IT Services.
- All employees, contractors, and IT staff who are assigned, handle, or are responsible for company IT assets.
- Assets across all 14 Summit IT Services office locations and in the possession of remote workers.

3. Policy Statements

3.1 Asset Tagging and Registration

3.1.1 Every hardware asset must be assigned a unique asset tag before deployment. Asset tags follow the Summit IT naming convention:

Asset Type	Tag Format	Example
Windows laptop	SUM-LT-#####	SUM-LT-04821
Mac laptop	SUM-MB-#####	SUM-MB-02347
Monitor	SUM-MN-#####	SUM-MN-11093
Mobile phone/tablet	SUM-MB-##### (shared prefix)	SUM-MB-00512
Network equipment	SUM-NW-#####	SUM-NW-00078
Printer/MFP	SUM-PR-#####	SUM-PR-00019
Server	SUM-SV-#####	SUM-SV-00003

3.1.2 Physical asset tags (durable labels) must be affixed to the device in a visible location before deployment. Asset tag numbers must be entered in the IT Asset Management system (SummitDesk CMDB) at the time of tagging.

3.1.3 All assets are registered in the SummitDesk CMDB with the following attributes: asset tag, serial number, manufacturer, model, purchase date, purchase order number, assigned user (employee ID), assigned location, and warranty/support expiration date.

3.1.4 Virtual machines, cloud instances (AWS EC2), and containers are tracked in the cloud asset inventory maintained by L3 Engineering and linked to the CMDB.

3.2 Asset Assignment

3.2.1 IT assets are assigned to specific named employees. Group or pool assets (e.g., conference room equipment, loaner laptops) are assigned to an IT asset pool with a designated IT owner.

3.2.2 Asset assignments are recorded in the CMDB and updated every time a device changes hands. Transfer of asset ownership must be processed through SummitDesk.

3.2.3 Employees must sign an **Asset Acknowledgment Form** upon receipt of any hardware with a value over \$500. This form confirms the employee's responsibility for the asset and their understanding of this policy. The signed form is stored in the HRIS and linked to the CMDB record.

3.2.4 Standard hardware assigned to employees:

Role	Standard Devices
Windows-environment employee	Dell Latitude 7440, Dell 24"/27" monitor, Dell WD19 dock, Logitech keyboard/mouse
macOS-environment employee	MacBook Pro 14" (Apple silicon), Dell 24"/27" USB-C monitor, USB-C dock, Logitech keyboard/mouse
Hot-desk / pool user	Pool laptop, shared monitor/dock at hot-desk station

3.2.5 Additional peripherals (second monitor, ergonomic accessories, headsets) may be requested through SummitDesk with manager approval and subject to budget availability.

3.3 Asset Security and Configuration

3.3.1 All laptops and desktops must be enrolled in and managed by: - **Windows devices:** Microsoft Intune (Autopilot provisioning) - **macOS devices:** Jamf Pro (zero-touch deployment)

3.3.2 Security baselines applied to all managed endpoints include: - CrowdStrike Falcon EDR sensor installed and active. - Okta Verify enrolled for MFA. - GlobalProtect VPN client installed and configured. - Full-disk encryption enabled (BitLocker on Windows; FileVault on macOS). - Screen lock set to activate after 5 minutes of inactivity. - OS and application auto-update policies enforced.

3.3.3 Employees must not modify hardware configurations (add/remove RAM, storage, or components) without prior approval from IT. Unauthorized hardware modifications void warranty coverage and may create security vulnerabilities.

3.3.4 Employees must not remove or deface asset tags. Damaged or missing asset tags must be reported to the IT Service Desk immediately.

3.4 Asset Maintenance and Repairs

3.4.1 Hardware defects, damage, or malfunctions must be reported to the IT Service Desk via SummitDesk or #it-help on Slack. Employees must not attempt to repair company hardware themselves or use unauthorized third-party repair services.

3.4.2 Warranty repairs are handled by IT L2 Desktop & Systems through the appropriate vendor channels (Dell ProSupport for Latitude laptops; Apple-authorized service for MacBook Pros).

3.4.3 Accidental damage (liquid spills, drops, screen cracks) must be reported to the IT Service Desk within 24 hours. Failure to report damage in a timely manner may result in the employee bearing repair or replacement costs.

3.4.4 Loaner devices may be issued during repair periods, subject to availability. Loaner devices are tracked in the CMDB with the original asset noted in the record.

3.5 Asset Inventory and Audits

3.5.1 IT Security & Compliance conducts a **physical inventory audit** of all IT hardware assets annually. Employees may be required to present their assigned devices for verification.

3.5.2 Intune and Jamf Pro provide real-time device inventory data that is reconciled with the CMDB quarterly. Discrepancies (devices in CMDB not found in MDM, or MDM devices not in CMDB) are investigated within 10 business days.

3.5.3 CrowdStrike Falcon host inventory is also reconciled with the CMDB quarterly to detect unmanaged or rogue devices on the network.

3.5.4 Employees are expected to have their assigned devices available and powered on during inventory audit periods. Remote employees will be verified via Intune/Jamf check-in records and remote verification requests.

3.6 Software License Management

3.6.1 Software licenses are tracked in the CMDB alongside hardware assets. License records include: product name, vendor, license type, seat count, expiration date, and assigned users.

3.6.2 IT conducts an annual software license audit to ensure: - No over-deployment beyond purchased seat counts. - All deployed software has a valid, active license. - Unused licenses are identified for potential reclamation to reduce cost.

3.6.3 License renewals must be initiated at least 60 days before expiration. The CMDB generates automated renewal alerts at 90 days and 30 days prior to expiration, routed to IT and Finance.

3.6.4 When employees are offboarded, their software licenses are evaluated for reclamation. Licenses assigned to a specific named user (e.g., certain Creative Cloud seats) must be unassigned within 5 business days of departure.

3.7 Asset Return and Offboarding

3.7.1 Employees must return all company-issued hardware upon separation from Summit IT Services. Standard timelines:

Departure Type	Return Deadline
Voluntary resignation (standard notice)	Last working day
Involuntary termination	At or before exit meeting
Remote employee departure	Within 5 business days via IT-provided prepaid shipping label

3.7.2 Returned devices are inspected by L2 Desktop & Systems for damage. The asset record in the CMDB is updated to reflect "returned" status. The device is then wiped per section 3.8 before reassignment.

3.7.3 Failure to return assets within the required timeline may result in the replacement cost being withheld from final pay where permitted by law, or pursued through legal means.

3.8 Asset Disposition and Data Sanitization

3.8.1 Hardware that has reached end of life, been retired, or is no longer needed must be processed through the IT Asset Disposition (ITAD) process. Employees must not dispose of company hardware independently (trash, donate, sell, give away).

3.8.2 All storage media on retired devices must be sanitized before physical disposal or reuse, following NIST SP 800-88 guidelines:

Media Type	Sanitization Method
SSD (Windows/Mac laptops)	Cryptographic erase via Intune/Jamf wipe + Secure Erase command
HDD	DoD 5220.22-M multi-pass overwrite or physical shred
Mobile device	Factory reset via Intune full wipe
USB drives	Secure erase or physical destruction

3.8.3 A **Certificate of Data Destruction** must be obtained and retained for all Restricted-data devices and all devices used by IT administrators.

3.8.4 Devices cleared for disposal are turned over to an IT-approved ITAD vendor for environmentally responsible recycling. The ITAD vendor must provide a certificate of recycling for each batch. ITAD vendor agreements must include data destruction warranties.

3.8.5 Devices with residual warranty value may be returned to the vendor or resold through the ITAD vendor with prior Finance approval. Proceeds are credited to IT budget.

4. Roles & Responsibilities

Role	Responsibility
All Employees	Safeguard assigned assets; report damage/loss immediately; return assets on departure; sign Asset Acknowledgment Form
Managers	Approve peripheral requests; confirm team asset assignments during audits; initiate offboarding in SummitDesk promptly
IT Service Desk (L1)	Accept hardware reports; process loaner requests; route repairs; update CMDB on return
L2 Desktop & Systems	Deploy and image new devices; manage CMDB; conduct physical audits; process returned/retired devices; coordinate ITAD
IT Security & Compliance	Own policy; manage license audit; reconcile MDM with CMDB; oversee ITAD compliance
L3 Engineering	Maintain cloud asset inventory; manage server and network asset records
Finance	Approve hardware purchases; manage vendor contracts; process asset write-offs

5. Enforcement & Consequences

- **Failure to report damage:** Written warning; potential cost recovery.
- **Unauthorized hardware modification:** Written warning; repair costs may be assessed; warranty void.
- **Failure to return assets on departure:** Financial recovery of replacement cost; legal action if warranted.
- **Disposing of company hardware without IT ITAD process:** Formal HR action; liability for any resulting data breach.
- **Removing asset tags:** Written warning; investigation of asset's chain of custody.

6. Exceptions

Exceptions (e.g., employee retaining a device post-departure for a specific project wind-down period) require documented approval from the employee's manager, IT Security, and Finance, with a defined return date not to exceed 30 days.

8. Revision History

Version	Date	Author	Summary of Changes
1.0	2021-04-01	IT Operations	Initial asset management policy
1.1	2022-11-01	IT Operations	Added MDM-CMDB reconciliation requirement; updated asset tag format
2.0	2024-08-01	IT Security & Compliance	Full rewrite; added NIST 800-88 sanitization table; CrowdStrike inventory reconciliation; software license audit process; updated ITAD requirements
2.0.1	2025-07-18	IT Security & Compliance	Annual review; updated standard hardware table to reflect current models; no structural changes
