

RUN-002 - New User Account Provisioning

Purpose

Defines the end-to-end process for provisioning all required accounts, access, and tools for a new Summit IT employee or contractor. This runbook covers identity creation in Okta, Microsoft 365 licensing, group assignments, and communication to the hiring manager. Hardware staging is covered in RUN-010.

Prerequisites / Access Needed

Requirement	Details
Approved New Hire REQ ticket	HR must submit the new hire intake form at https://help.summitit.com at least 3 business days before start date
Okta Admin Console	Role: User Admin or higher
Microsoft 365 Admin Center	Role: User Management Admin
SummitDesk admin access	To update and close the provisioning REQ ticket
Entra ID / Azure AD	Read-only access sufficient; writes handled via Okta sync

Required Information (From HR Intake Form)

Field	Example
Legal first name	Maria
Legal last name	Okonkwo
Preferred name	Maria
Job title	IT Support Analyst
Department	IT - Service Desk
Manager UPN	david.reyes@summitit.com

Start date	2026-07-14
Office location	Denver HQ
Employee type	Employee / Contractor
Employee ID	SUM-08841
Personal email (for Okta invite)	m.okonkwo.personal@gmail.com
Business applications needed	Standard; any special apps noted in ticket

Procedure

1. Confirm Ticket & Information

1. Open the REQ ticket in SummitDesk.
2. Verify all required fields are populated. If any are missing, **do not proceed** - comment on the ticket requesting the information from HR and pause the workflow.
3. Check start date. If fewer than 3 business days remain, flag as urgent and notify your L2 lead.

2. Create Okta Account

1. Log into <https://summitit.okta.com/admin>.
2. Go to **Directory > People > Add Person**.
3. Fill in the following fields:

Okta Field	Value
First name	Legal first name from intake form
Last name	Legal last name
Username	firstname.lastname@summitit.com
Primary email	firstname.lastname@summitit.com
Secondary email	Personal email from intake form
Password	Select Send user activation email to primary email (will auto-activate on start date)
Activation	Set to Activate Later if start date is in the future

4. Click **Save**.
5. Note the Okta User ID (visible in the URL of the profile page) and record it in the ticket.

Naming conflicts (e.g., two Maria Okonkwos): use `firstname.m.lastname@summitit.com`. Confirm with HR and document in ticket.

3. Assign Okta Groups (Role-Based Access)

1. On the new user's Okta profile, click the **Groups** tab.
2. Add the following **standard groups** for all employees:

Group Name	Purpose
All-Employees	Base policy - Okta dashboard, password policy
M365-Standard-License	Triggers M365 E3 license assignment via Okta provisioning
VPN-GlobalProtect-Standard	GlobalProtect VPN access
1Password-Business	1Password license
Slack-Standard	Slack workspace access
Zoom-Standard	Zoom license

3. Add any **department-specific groups** from the intake form (e.g., `IT-ServiceDesk-Team`, `SharePoint-IT-Collab`).
4. Add any **application groups** requested in the special access section.

4. Verify Microsoft 365 Provisioning

Okta pushes the account to Microsoft Entra ID and assigns the M365 E3 license automatically via the `M365-Standard-License` group. Allow up to 15 minutes for sync.

1. Go to <https://admin.microsoft.com> > **Users > Active Users**.
2. Search for the new user's UPN.
3. Confirm: - Account is present and **Active** - License assigned: **Microsoft 365 E3** - Display name and UPN are correct
4. If the account is not present after 20 minutes, trigger a manual Okta push: - Okta Admin > Directory > People > [User] > **Applications** tab > Find Microsoft 365 > Click **Sync Now**.

5. Create M365 Mailbox

The M365 E3 license automatically provisions an Exchange Online mailbox. Verify:

1. In M365 Admin Center > **Users > Active Users > [User]** - confirm **Mail** tab shows mailbox created.
2. Mailbox may take up to 30 minutes to fully provision.

6. Set Manager in Microsoft 365

1. In M365 Admin Center > **Users > Active Users > [User] > Contact Info** tab.

2. Under **Manager**, enter the manager's UPN and save.

7. Add to Distribution Lists / Shared Mailboxes

1. Review intake form for any shared mailbox or distribution list requirements.
2. In M365 Admin Center > **Groups > Active Groups**, locate the appropriate group.
3. Add the new user as a **Member**.
4. For shared mailboxes, also grant **Full Access** and **Send As** permissions if required (see RUN-004 for shared mailbox detail).

8. Provision 1Password

1Password is assigned via the 1Password-Business Okta group (Step 3). Verify:

1. Log into <https://summitit.1password.com/admin>.
2. Confirm the user appears in **People** with status **Active** or **Invited**.
3. If not present within 30 minutes, click **Sync** in the Okta provisioning settings for 1Password.

9. Enroll Device (If Hardware Pre-Staged)

If hardware has been staged per RUN-010:

- Windows devices: Confirm the device is enrolled in **Intune** under the user's UPN - go to <https://intune.microsoft.com> > Devices.
- Mac devices: Confirm the device appears in **Jamf Pro** under the correct user - <https://summit.jamfcloud.com> > Computers.
- Ship or coordinate in-person pickup per the logistics plan in the ticket.

10. Send Welcome Communication to Manager

Reply to the REQ ticket and send the following information to the manager (via email to their UPN):

Subject: IT Account Ready - [New Employee Name] - Start Date [Date]

Hi [Manager Name],

Accounts have been provisioned for [New Employee Name] (Start: [Date]).

Login details:

- Username: `firstname.lastname@summitit.com`
- Activation link: Sent to personal email [personal email] - valid 7 days
- First login: <https://summitit.okta.com>

The employee will need to:

1. Click the activation link and set their password.
2. Enroll Okta Verify MFA (required before accessing any apps).
3. Log into Okta to access M365, Slack, Zoom, and other apps.

Hardware: [Staged / Being shipped / Pickup at Denver HQ - details below]

If anything is missing or incorrect, reply to ticket [REQ-#####].

11. Close / Set to Pending Start Date

1. Update the REQ ticket with a summary of all accounts provisioned.
2. If the start date is in the future, set ticket status to **Pending** with a follow-up reminder for the start date.
3. On the start date, confirm the user's activation was successful and close the ticket.

Verification

Check	Expected Result
Okta user status	Active (or Staged if start date future)
Okta groups	All standard + role-specific groups assigned
M365 user present	Yes, with E3 license
M365 mailbox	Provisioned and accessible
Okta Verify enrolled	Pending user self-enrollment on activation
1Password	User invited or active
Manager notified	Welcome email sent; acknowledged in ticket

Rollback / If It Fails

Symptom	Action
Okta to M365 sync fails	Check Okta M365 provisioning logs: Okta Admin > Applications > Microsoft Office 365 > Provisioning > Logs
License not assigned	Manually assign in M365 Admin Center; check if <code>M365-Standard-License</code> Okta group is mapped to a license plan
UPN conflict in Okta	Adjust username format; notify HR; document in ticket
Activation email not received	Resend via Okta Admin > User profile > Resend Activation Email; verify personal email address

Okta activation link expired	Reactivate via Okta Admin > User profile > Activate
------------------------------	---

Escalation

Condition	Escalate To	Contact
Okta provisioning errors requiring admin role changes	L2 - Identity & Access	identity@summitit.com
Special application access not in standard groups	L2 - relevant app owner	Per app owner listed in SummitDesk CMDB
Security-sensitive role requiring approval workflow	L2/L3	identity@summitit.com
Start date <24 hours away with incomplete provisioning	L2 lead	Teams: @I2-identity; on-call if after hours
