

SLA and Priority Matrix

This document defines how Summit IT Services prioritizes and resolves incidents and service requests. All tickets submitted to **SummitDesk** (<https://help.summitit.com>) are assigned a priority level that determines the response and resolution commitments.

Business Hours Definition

Category	Hours
Staffed service desk hours	7:00 AM - 7:00 PM ET, Monday through Friday
On-call / emergency (P1 only)	24 hours a day, 7 days a week, 365 days a year
Observed holidays	New Year's Day, Memorial Day, Independence Day, Labor Day, Thanksgiving, Christmas Day
Holiday coverage	L1 reduced coverage (email and portal only); on-call for P1 still active

"Business hours" and "business days" referenced throughout this document and the service catalog refer to **7:00 AM - 7:00 PM ET, Monday-Friday, excluding observed holidays**.

Priority Definitions

P1 - Critical

Definition: A major outage, service disruption, or security incident affecting many users simultaneously, with no available workaround. Business operations are severely impacted or completely halted.

Examples:

- Microsoft 365 / Okta / Slack fully down for the entire company or a large office
- Corporate network (internet or VPN) unavailable at a major office
- CrowdStrike or security monitoring platform down
- Active ransomware, data breach, or security incident in progress
- Phone system outage affecting customer-facing teams
- All conference room AV systems at HQ inoperable during a board-level event

SLA Targets:

Metric	Target
--------	--------

Initial response	15 minutes (24/7)
Incident Commander assigned	30 minutes
Stakeholder communication sent	45 minutes
Resolution target	4 hours
Post-incident review	Within 5 business days

How to report a P1: Call **+1 (800) 555-7866** immediately. Do not rely on email or portal for initial P1 notification - phone triggers 24/7 on-call escalation.

P2 - High

Definition: A significant issue affecting a single critical user (e.g., an executive, customer-facing role) or a small group of users where no adequate workaround exists and business impact is immediate.

Examples:

- CEO or C-suite executive cannot access email or systems
- A sales representative cannot access Salesforce on a customer call day
- An employee's laptop is completely non-functional with no loaner available
- VPN access down for a remote employee with no office alternative
- Shared mailbox for customer support team not receiving emails

SLA Targets:

Metric	Target
Initial response	1 business hour
L2 escalation (if needed)	2 business hours
Resolution target	8 business hours
Status update to requester	Every 2 business hours until resolved

P3 - Medium

Definition: A standard issue that affects one or more users but a workaround exists, or a service request with moderate business impact (e.g., new hire onboarding, employee offboarding).

Examples:

- Email client not syncing but webmail (OWA) is working

- Printer not working; nearby printer is available
- VPN connecting slowly or intermittently
- New hire setup request submitted 3-4 business days in advance
- Employee offboarding initiated
- Conference room AV equipment malfunctioning (no meeting currently scheduled)
- Software installation failing; employee can temporarily use web version

SLA Targets:

Metric	Target
Initial response	4 business hours
Resolution target	2 business days
Status update to requester	Every business day

P4 - Low

Definition: A routine service request or minor issue with no immediate business impact. The user can continue working normally.

Examples:

- New software license request
- Laptop accessory request (keyboard, mouse, monitor stand)
- Additional application access request
- Guest Wi-Fi pre-registration for a future visitor
- Distribution list membership change
- New shared mailbox creation
- Mobile device enrollment assistance
- Training request for a tool

SLA Targets:

Metric	Target
Initial response	1 business day
Resolution target	5 business days
Status update to requester	Every 2 business days

Priority Matrix Summary

Priority	Definition	Response	Resolution	On-Call?
P1 - Critical	Major outage / many users / no workaround	15 minutes	4 hours	Yes (24/7)
P2 - High	Single critical user / no workaround / immediate impact	1 business hour	8 business hours	No
P3 - Medium	Workaround available / moderate impact / fulfillment requests	4 business hours	2 business days	No
P4 - Low	Routine requests / no immediate impact	1 business day	5 business days	No

Priority Assignment

Priority is assigned by the Service Desk agent at the time the ticket is triaged. Requesters may suggest a priority level when submitting, but IT reserves the right to adjust priority based on actual business impact.

Priority escalation: If you believe your ticket has been assigned an incorrect priority, contact your manager, who may escalate to the Service Desk Team Lead by replying to the ticket or calling **+1 (800) 555-7866**. Unilateral escalation by end users (e.g., marking a ticket P1 without IT agreement) does not guarantee P1 response.

SLA Clock

- The SLA clock **starts** when the ticket is created in SummitDesk (for phone calls, when the call is logged).
- The SLA clock **pauses** when a ticket is in "Awaiting User Information" status - the clock resumes when the user responds.
- The SLA clock **stops** when the ticket is marked "Resolved."
- Tickets not responded to within 3 business days of resolution are automatically closed.
