

SVC-03 - Application / Data Access Request

Description

Access to Summit IT internal applications, data systems, and network shares is granted on a least-privilege basis. Employees receive a base set of access when they are onboarded (see [SVC-04](#)), but additional application roles, data environments, or elevated permissions require a formal access request.

This service covers:

- Access to a new application or system not included in the employee's default role profile
- Additional roles or permission levels within an existing application (e.g., upgrading from Viewer to Editor in Tableau)
- Access to SharePoint sites, shared drives, or OneDrive folders owned by another team
- Temporary elevated or privileged access (time-boxed)
- Access for contractors and temporary workers to specific systems

Who Can Request

Any employee may request access for themselves. Managers may request access on behalf of direct reports. Requests for privileged or admin-level access require the requesting employee's manager **and** the system owner to approve.

What's Included

Access Type	Examples	Approver
Standard application access	Salesforce read-only, Jira project member, Tableau viewer	Direct manager
Elevated application role	Salesforce admin, Jira project admin, Tableau author	Manager + system owner
SharePoint / OneDrive folder	Marketing SharePoint, Finance OneDrive shared folder	Site/folder owner
Network file share	\\summit-fs01\Finance\Reports	Manager + share owner
Cloud environment (AWS)	Read-only AWS console, S3 bucket access	Manager + Cloud Ops

Privileged / admin access	Domain admin, Entra ID admin, Okta admin	Manager + CISO
Temporary access (time-boxed)	Any of the above with an expiry date $\leq$ 90 days	Standard approver

All access grants are logged in the SummitDesk access management module and reviewed quarterly by the IT Security team as part of the Access Recertification program.

How to Request

1. Open <https://help.summitit.com> and select **Request a Service -> Access & Identity -> Application Access**.
2. Search for the application or system by name.
3. Specify the role or permission level needed and the business justification.
4. For temporary access, enter the access end date (maximum 90 days; renewable).
5. Submit. The portal automatically identifies and notifies the required approvers.
6. Once all approvals are collected, IT provisions access within the fulfillment window.

Tip: If you are unsure what access level you need, open an incident ticket in SummitDesk and an L1 agent will help identify the correct role before submitting a formal request.

Fulfillment SLA

Access Type	Target Fulfillment	Notes
Standard application access (single approver)	2 business days	P4 SLA
Elevated role (two approvers)	3 business days	P4 SLA; clock starts after all approvals
SharePoint / OneDrive folder	1 business day	P4 SLA
Privileged / admin access	5 business days	P3 SLA; includes Security review
Emergency business-critical access	4 business hours	P2 SLA; VP + CISO approval required
Temporary access removal (early termination)	4 business hours	P3 SLA

Cost / Chargeback

Access requests themselves carry no direct IT charge. However, if the access requires an additional software license (e.g., a named Salesforce seat), the license cost is charged to the requesting department per [SVC-02](#).
