

SVC-09 - Guest Wi-Fi & Visitor Access

Description

Summit IT provides a secure guest Wi-Fi network (**Summit-Guest**) for visitors, clients, and contractors who need temporary internet access but do not have Summit IT credentials. The guest network is isolated from the corporate network and provides internet-only access.

This service covers:

- **Visitor Wi-Fi access codes** for individual guests or small groups
- **Pre-registered bulk access** for events with many external attendees
- **Temporary contractor portal accounts** for contractors who need limited web-based system access without full Okta provisioning

Who Can Request

Any Summit IT employee may request guest Wi-Fi access on behalf of a visitor. The requesting employee is responsible for the visitor's use of the guest network during their visit.

What's Included

Guest Wi-Fi (**Summit-Guest**)

Parameter	Value
SSID	Summit-Guest
Authentication	Captive portal - daily access code or pre-registered email
Access type	Internet only; no access to internal Summit IT resources
Bandwidth limit	25 Mbps per session
Session length	8 hours; renewable at captive portal
Security	Isolated VLAN; no access to Summit-Corp or internal subnets

Daily access codes are available from the reception desk at each office. Employees hosting visitors may also pre-generate a time-limited code for their guest through SummitDesk.

Pre-Registered Guest Access

For visitors who need uninterrupted access across multiple days or for large events:

- Guest is registered by the Summit IT host employee
- Visitor receives an email with a personal login link (no daily code needed)
- Access window: 1-30 days (configurable)
- Automatically expires at end of access window

Visitor Badge IT Integration

IT does not manage physical visitor badges; however, for offices using integrated physical access systems, guest Wi-Fi pre-registration can be linked to the visitor badge system through reception. Contact reception at the relevant office to coordinate.

How to Request

Same-Day / Walk-In Visitor

Visitors may use the **daily access code** available at the front desk reception at any Summit IT office. No pre-request required.

Pre-Registered Guest Access

1. Go to <https://help.summitit.com> -> **Request a Service** -> **Network & Access** -> **Guest Wi-Fi Access**.
2. Enter the visitor's full name, company, email address, the date(s) of access, and the office location (or select Remote / Virtual for virtual event use).
3. Specify the access duration (1-30 days).
4. Submit. The visitor receives an automated email with their personal captive portal credentials within 1 business hour.

Event / Bulk Guest Access (10+ visitors)

1. Submit the same form and select **Event / Bulk Access**.
2. Upload a CSV file with visitor names and email addresses (template available on the form).
3. Provide the event date range and location.
4. Submit at least **1 business day before the event**. IT will provision all accounts and provide a summary code sheet to the event coordinator.

Fulfillment SLA

Request Type	Target Fulfillment	Notes
Daily access code (walk-in)	Immediate	Available at reception; no ticket needed

Pre-registered single guest	1 business hour	P4 SLA; automated provisioning
Pre-registered bulk / event access	1 business day	P4 SLA; requires 1 BD advance notice
Guest network outage	1 business hour	P3 SLA

Cost / Chargeback

Guest Wi-Fi access is provided at no cost to departments. No chargeback applies.

Acceptable Use

Guest Wi-Fi is subject to Summit IT's Acceptable Use Policy. The hosting employee agrees that the visitor will:

- Use the network for legitimate business or personal internet access only
- Not attempt to access internal Summit IT resources
- Not conduct illegal activity, including unauthorized scanning or data interception

Summit IT reserves the right to terminate guest access at any time for policy violations.
